

**Now even families that don't own our furniture can benefit from how we make it.**

Established as a leader in eco-friendly manufacturing, LEE now brings you naturalLEE. FSC and SFI certified, naturalLEE provides the same quality made-in-the-USA standards which LEE has built its reputation, with innovative, "responsible" components.

**1. Seat Cushions:** LEE's standard foam cushion is now renewable, soy-based *preserve* wrapped in 100% recycled fibers. Our upgrade is the luxuriously soft Eco-Lux cushion made with a *preserve* core wrapped in corn-based *Ingeo* fibers blended with down and feathers. *Ingeo* is the world's first fiber made from 100% renewable resources. Both reduce the amount of petroleum-based products used, which is better for our homes and our environment.

**2 & 3. Back and Throw Pillows:** 100% recycled fibers made from clear and white plastic bottles is standard. The luxuriously soft Eco-Lux package is a blend of down and feathers with renewable *Ingeo* fibers, the world's first fiber made from 100% renewable resources.

As part of our commitment toward a better future, LEE contributes to the American Forests® Global ReLeaf Initiative for every piece of naturalLEE furniture sold.

**4. Seat Deck & Trim Pad:** Made up of 80% regenerated fibers.

**5. Arm Padding:** Made of *preserve* foam with soy-based BioH polyol.

**6. Finish:** Not only naturalLEE, but all LEE frames use water-based finishes.

**7. Fabric:** Fabrics are made from organic and natural fibers. This is in addition to our premium selection of LEE fabrics.

**8. Frame:** Constructed with engineered wood panels from FSC & SFI certified sustainable forests. Metal components and springs are 80% recycled metal.

**Best of all, being Earth-friendly comes without sacrifice. Be assured that LEE is as soft and comfortable as ever with naturalLEE as our standard.**
